Lab - Research a Hardware Upgrade

Introduction

Use the Internet, a newspaper, or a local store to gather information about hardware components. Your customer's computer currently has one module of 2 GB of RAM, a 500 GB hard disk drive, and a PCIe video adapter card with 256 MB of RAM. Your customer wants to be able to play advanced video games.

Instructions

Step 1: Research memory options.

Shop around, and in the table below list the brand, model number, features, and cost for two different 8 GB modules of DDR3.

Brand and Model Number	Features	Cost
Kingston KVR16N11	*Capacity: 8GB* *Type: DDR3* *Speed: 1600MHz*	*₱2,860.00*
Ramsta 8gb Memory	*Capacity: 8GB* *Type: DDR3* *Speed: 1600MHz*	*₱1,250.00*

Question:

Based on your research, which RAM would you select? Be prepared to discuss your decisions regarding the RAM you select.

Based on my thorough research, I was able to locate two types of DDR3 RAMS with their own corresponding brands and prices. If I were to pick a RAM stick that what I think is fit for moderate to light gaming I would pick the Kingston KVR16N11 due to its brands' reputation of good performance and will likely be worth my money if budget is not the problem.

Step 2: Research hard disk drive options.

Shop around, and in the table below list the brand, model number, features, and cost for a 3 TB 7200 rpm SATA 3 hard disk drive and a 500GB or 1TB solid state drive (SSD).

Brand and Model Number	Features	Cost
Seagate ST1000DM010 (HDD)	*Capacity: 3TB*	*₱4,306.00*
Western Digital SN770 (SDD)	*Capacity: 500GB*	*₱3,815.00*

Question:

Based on your research, which hard disk drive would you select? Be prepared to discuss your decisions regarding the hard disk drive you select.

HDD or Hard Disk Drivers are older versions of storage devices with slower data processes while SSD drivers are heavily used nowadays due to their ability to process data at astonishing speeds. Hence, I would choose the Western Digital SN770 since it offers efficiency, productivity and acceptable performance.

Step 3: Research video adapter card options.

Shop around, and in the table below list the brand, model number, features, and cost for two different PCIe video adapter cards with at least 1 GB of RAM.

Brand and Model Number	Features	Cost
ASUS GeForce® GT 730 *GT730-SL-2GD5-BRK*	*Capacity: 2GB RAM* *Engine Clock: 902MHz*	*₱4,750.00*
AMD Radeon™ RX 6500 XT	*Capacity: 4GB RAM* *Engine Clock: 2820 MHz*	*₱9,450.00*

Question:

Based on your research, which video adapter card would you select? Be prepared to discuss your decisions regarding the video adapter card you select.

These options are a no brainer for me since the decision heavily depends on what kind of gaming I would want to do. If I want to play games lightly and not spend a lot of money on my GPU, I would pick the first option ASUS GeForce GT 730 GT730-SL-2GD5-BRK. But knowing myself, I play a lot of heavy games and therefore I would resort to the AMD Radeon RX 6500 XT since it is powered by AMD and has a lot more RAM even though it has a significant amount in price than the first GPU.
